

FIRE DOORS

*Keeping you safe in the
event of a fire.*

YOUR FRONT DOOR IS A FIRE DOOR

It plays a vital part in keeping you and your neighbours safe by slowing down the spread of smoke and fire. For it to do its job, it needs to stay in good condition.

Fire doors save lives.

In a fire, your door is designed to hold back smoke and flames long enough for you to stay safe or leave the building.

Keeping your fire door in good condition protects everyone in your block.

Help keep your fire door working properly

Make sure you:

- ☒ Keep your fire door fully closed. Don't wedge it open.
- ☒ Leave the door as it is. Don't drill into it, cut any holes, add cat flaps, or make any changes.
- ☒ Keep the self-closing device in place. Don't remove or disable it.
- ☒ Let us know if the gap around the door isn't even all the way around.
- ☒ Tell us if seals are loose, missing, or painted over.
- ☒ Check the door closes smoothly into the frame without sticking or dragging.

If your door isn't closing properly, looks damaged, or you're simply not sure it's working as it should, please get in touch.
We'll take a look and sort it.
